Thousands of passengers and cargo workers were stranded in several seaports after the coast guard said it suspended inter-island ferry services and barred fishing boats from venturing into the increasingly rough seas.

SalbaBida

Tutulong

"People have been stuck on roofs of their houses for several hours now," former Vice President Leni Robredo, who lives in the northeastern city of Naga, said in a post on Facebook early Wednesday. "Many of our rescue trucks have stalled due to the floods."

SalbaBida

CODERZZZ

Project Title

[Sal-bá]; Spanish word “salva”, *to save*; *to rescue*

[Bí-da]; Spanish word “vida”, *life*

SalbaBida = “*to save/rescue lives*”

Relevance of the product:

- Rescue & Urgency
- Aid & Relief

PROJECT DEVELOPMENT

Category

- Real-time location and communication Web Application

PROJECT DEVELOPMENT

Issues

- Challenges in pinpointing victims' locations
- Lack of immediate communication
- Limited coordination between donors, victims, and responders

Features

- Fast emergency response
- Better Resource Management
- Updates on available donations and emergency resources

PROJECT DEVELOPMENT

UNRESOLVED RESCUE CALLS

CALAMITY TOLL

UNRESOLVED RESCUE CALLS

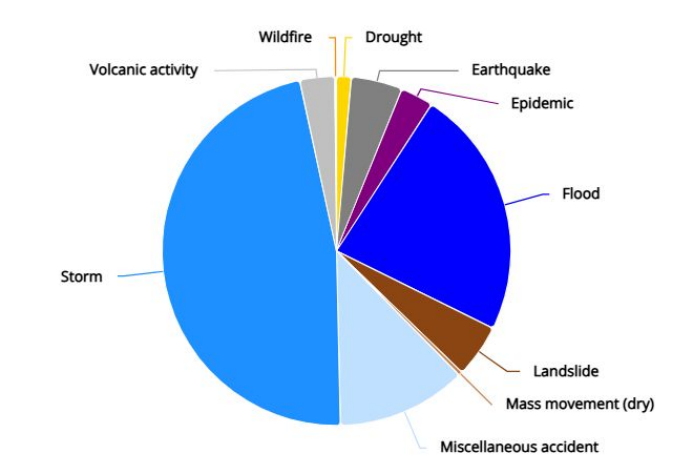
DZMM Teleradyo, 2020. Facebook

Philippine Emergency Alert, 2024. Facebook

"Last night, my phone was filled with nonstop calls and text messages from people pleading 'Help us, rescue us,'" Villafuerte said. "It's sad when you feel helpless because of this deluge of problems." Villafuerte, R(2024)

CALAMITY TOLL

In 2023, natural hazards and conflict affected more than 13.7 million people in the Philippines. Only 11 tropical cyclones (TC) entered the Philippines Area of Responsibility (PAR) in 2023 from an average of 20 tropical cyclones, tied with 2010 with fewest number of TCs since 1948. Despite the below average TCs entering PAR and strong typhoons not making direct landfall, it enhanced southwest monsoon and shear lines that brought heavy rains causing floods and landslides to affected areas. In December 2023, a series of strong earthquakes hit Mindanao that caused extensive damage to infrastructures, displacement of people and loss of lives. The year 2023 was also seen as the start of a strong El Niño that increases the likelihood of below-normal rainfall conditions and will persist until May 2024.



Located along the typhoon belt in the Pacific, the Philippines is visited by an average of 20 typhoons every year, five of which are destructive. Being situated in the “Pacific Ring of Fire” makes it vulnerable to frequent earthquakes and volcanic eruptions. Its geographical location and physical environment also contributes to its high-susceptibility to tsunami, sea level rise, storm surges, landslides, flood/flashflood/flooding, and drought.

TARGET AUDIENCE

- Possible victims of natural disasters
- People living in calamity prone areas
- People who ought to volunteer
